providing a platform for bringing titles with rich storytelling and atmosphere to life. distribution partners worldwide. information about both current and upcoming game projects can be found at our publishing line-up page.

Cesar Bittar (CEO)

A seasoned executive, Phoenix Online head Cesar Bittar boasts extensive experience in game

development and production, having previously worked with major studios such as Telltale Games and Activision on blockbuster titles like Spider-Man 3™, Tales of Monkey Island™ and Sam & Max Season 3™, among others. Cesar has acted as Producer and Director for Phoenix Online Studios' The Silver Lining™, Cognition: An Erica Reed Thriller™ and

Vitek Goyel (Vice President)

A noted gaming entrepreneur and business development executive,

Goyel is a seasoned leader in the field of video game art and production. In addition to his work as VP of Phoenix Online Studios, he is the founder of Pixeltek, a top game art outsourcing studio whose past clients include such industry notables as Foundation 9, Ubisoft, Atari, and Vivendi Universal. Goyel oversees business development and offshore

<https://web.archive.org/web/201...>

Phoenix Online Publishing™ is a new independent game publisher dedicated to bringing compelling, cutting-edge, down-to-earth titles to wider audiences in every genre, and across the full range of gaming platforms and devices. Providing game makers with business management, marketing, media and financial distribution services, the company is committed to providing a platform for bringing titles rich in storytelling and atmosphere to life.

Designed by indie game developers for indie game developers, Phoenix Online Publishing operates in parallel with Phoenix Online Studios™, an award-winning game development studio (The Silver Lining, Cognitions). A leading publisher of multiplatform games featuring unforgettable worlds, characters and narratives, the company maintains a full network of development, publishing and distribution partners worldwide. Further information about both current and upcoming game projects can be found at our publishing

www.phoenixpublishing.com/contactus@phoenixpublishing.com

Cesar Sittler (CEO)

A seasoned executive, Phoenix Online lead Cesar Sittler brings extensive experience in game

development and production, having previously worked with major studios such as Telltale Games and Activision on blockbuster titles like *Spider-Man 3™*, *Tales of Monkey Island™* and *Saint & Max Heroes™*, among others. Cesar has acted as Producer and Director for Phoenix Online Studios' *The Silver Lining™*, *Cognitions™*, *An Epic Road Thriller™* and Producer for *John Lennon's Mystery Empire Rising™* and the upcoming *Cabinet Knight™* remake.

Viktor Goyel (Vice President)

A noted gaming entrepreneur and business development executive, Goyel is a seasoned

leader in the field of video game art and production. In addition to his work as VP of Phoenix Online Studios, he is the founder of Pivotal, a top game art outsourcing studio whose past clients include such industry notables as Foundation 9, Ubisoft, Atari and Viacore. Goyel oversees business development and offshore management, and serves as Executive Producer on all games developed at Phoenix Online.

Richard Flores (CTO)

As CTO of Phoenix Online's development and publishing arm, Flores manages the company's award-winning

team of in-house programmers, artists and animators. A successful executive for Hollywood films such as *300*, *Fantasia*, *Fire and Ice* and *Deadwood*, his work bridges the gap between today's most popular storytelling mediums, including both traditional and interactive platforms. With a strong technical background, Richard oversees all art and programming functions at Phoenix Online, and serves as a fundamental pillar helping guide and oversee its development efforts.

Scott Steinberg (GM Publishing and Development)

The general manager of Phoenix Online Publishing,

Scott oversees business development and strategic planning for the company's publishing and distribution arm. A 15+ year product acquisitions veteran (Atari, DreamCatcher, Monopoly and Cluedo) consultant to gaming's largest publishers, he spearheads Phoenix's partnerships with leading developers and distribution houses, which help bring groundbreaking games to life. Advertising business author and award-winning writer, he served as CTO+ editor-in-chief for *The Wall St. Journal*. His insights have shaped dozens of cutting-edge consumer products.

Parent

Domain NS records

Nameserver records returned by the parent servers are:

[ns45.domaincontrol.com](#). ['97.74.102.23'] [TTL=172800]
[ns46.domaincontrol.com](#). ['173.201.70.23'] [TTL=172800]

[g.gtld-servers.net](#) was kind enough to give us that information.

TLD Parent Check

Good. [g.gtld-servers.net](#), the parent server I interrogated, has information for your TLD. This is a good thing as there are some other domain extensions like "[co.us](#)" for example that are missing a direct check.

Your nameservers are listed

Good. The parent server [g.gtld-servers.net](#) has your nameservers listed. This is a must if you want to be found as anyone that does not know your DNS servers will first ask the parent nameservers.

DNS Parent sent Glue

Good. The parent nameserver sent GLUE, meaning he sent your nameservers as well as the IPs of your nameservers. Glue records are A records that are associated with NS records to provide "bootstrapping" information to the nameserver.(see RFC 1912 section 2.3)

Nameservers A records

Good. Every nameserver listed has A records. This is a must if you want to be found.

NS

NS records from your nameservers

NS records got from your nameservers listed at the parent NS are:

[ns45.domaincontrol.com](#) ['97.74.102.23'] [TTL=3600]
[ns46.domaincontrol.com](#) ['173.201.70.23'] [TTL=3600]

Recursive Queries

Good. Your nameservers (the ones reported by the parent server) do not report that they allow recursive queries for anyone.

Same Glue

The A records (the GLUE) got from the parent zone check are the same as the ones got from your nameservers. You have to make sure your parent server has the same NS records for your zone as you do according to the RFC. This tests only nameservers that are common at the parent and at your nameservers. If there are any missing or stealth nameservers you should see them below!

Glue for NS records

INFO: GLUE was not sent when I asked your nameservers for your NS records.This is ok but you should know that in this case an extra A record lookup is required in order to get the IPs of your NS records. The nameservers without glue are:

97.74.102.23
173.201.70.23

You can fix this for example by adding A records to your nameservers for the zones listed above.

Mismatched NS records

OK. The NS records at all your nameservers are identical.

DNS servers responded

Good. All nameservers listed at the parent server responded.

Name of nameservers are valid

OK. All of the NS records that your nameservers report seem valid.

Multiple Nameservers

Good. You have multiple nameservers. According to RFC2182 section 5 you must have at least 3 nameservers, and no more than 7. Having 2 nameservers is also ok by me.

B+ https://intodns.com/et... ↺ ...

- ✓ SOA Serial Your SOA serial number is: **2020070800**. This appears to be in the recommended format of YYYYMMDDnn.
- ✓ SOA REFRESH OK. Your SOA REFRESH interval is: **28800**. That is OK
- ✓ SOA RETRY Your SOA RETRY value is: **7200**. Looks ok
- ✓ SOA EXPIRE Your SOA EXPIRE number is: **604800**. Looks ok
- ✓ SOA MINIMUM TTL Your SOA MINIMUM TTL is: **600**. This value was used to serve as a default TTL for records without a given TTL value and now is used for negative caching (indicates how long a resolver may cache the negative answer). RFC2308 recommends a value of 1-3 hours. Your value of **600** is OK.
- MX ⓘ MX Records Your MX records that were reported by your nameservers are:

0 etournamentpoker-com.mail.protection.outlook.com 104.47.74.10
104.47.45.36 (no glue)

[These are all the MX records that I found. If there are some non common MX records at your nameservers you should see them below.]
- ✓ Different MX records at nameservers Good. Looks like all your nameservers have the same set of MX records. This tests to see if there are any MX records not reported by all your nameservers and also MX records that have the same hostname but different IPs
- ✓ MX name validity Good. I did not detect any invalid hostnames for your MX records.
- ✓ MX IPs are public OK. All of your MX records appear to use public IPs.
- ✓ MX CNAME Check OK. No problems here.
- ✓ MX A request returns CNAME OK. No CNAMEs returned for A records lookups.
- ✓ MX is not IP OK. All of your MX records are host names.
- ✓ Number of MX records OK. Looks like you only have one MX record at your nameservers but that MX record has multiple IPs. You should be careful about what you are doing but overall it's ok.
- ✓ Mismatched MX A OK. I did not detect differing IPs for your MX records.
- ✓ Duplicate MX A records OK. I have not found duplicate IP(s) for your MX records. This is a good thing.
- ✓ Reverse MX A records (PTR) Your reverse (PTR) record:
10.74.47.104.in-addr.arpa -> mail-bn8nam080010.inbound.protection.outlook.com
36.45.47.104.in-addr.arpa -> mail-co1nam040036.inbound.protection.outlook.com
You have reverse (PTR) records for all your IPs, that is a good thing.
- WWW ⓘ WWW A Record Your www.etournamentpoker.com A record is:
www.etournamentpoker.com -> etournamentpoker.com -> [34.102.136.180]

[Looks like you have CNAME's]
- ✓ IPs are public OK. All of your WWW IPs appear to be public IPs.

HTTP 502 — Unable to Connect to the Origin Server

To: trapper_55@icloud.com
Subject: Here's some information that should be
helpful.

 GoDaddy

You asked for help. Here it is.

Thanks for talking with me, Brad. You're off to a good start. The info I mentioned will help you take your next step. You'll find it all here:

Based on the conversations you've had with GoDaddy Guides over the last couple of months it appears that your developer has severely damaged and compromised your website using what appears to be a back door to input some sort of malicious content. From what we can see and the past discussions you had with GoDaddy Guides you have 2 options. 1. Rebuild the website from the ground up and circumvent the backdoor the developer built into the site. 2. Try and fix whatever damage the developer caused however the backdoor the dev built into the site could potentially be accessed again maliciously by the developer.

If you need anything else, we're here to help.

Thanks,

Help 2.0
